ASBESTOS-CEMENT

THE BUILDING MATERIAL THAT FOUGHT THE WAR

At the outset of the war the call-up of the millions of men and women for the Services demanded the rapid construction of Camps, Hostels, and Depots, and Asbestos-cement was the ubiquitous material that solved the problem, providing the necessary cladding, finishings, roof and soil drainage, service mains, and in addition many parts of the equipment for the many thousands of buildings.

The large stocks of Asbestos-cement that were always maintained in peace time soon disappeared and production had to be stepped up to meet the situation.

What was achieved and it is now exemplified all over the world, testifies to the contribution to the war effort from the Asbestos-cement Industry.
